FOREWORD

OUR FEET TAKE CARE OF OUR MOBILITY AND FREEDOM OF MOVEMENT, BUT WHO TAKES CARE OF OUR FEET?

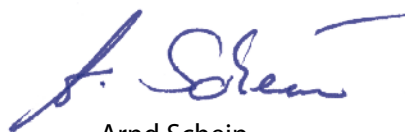

For four generations, our company has stood for conscientious, sensitive treatment of people and their mobility. To that end, we can contribute more than 30 years of experience in the production of therapeutic shoes.

Our knowledge, passed down through the generations, guarantees high quality and the best workmanship in our shoes.

The latest medical findings are considered in the development of our models and in the wishes of our customers and doctors in equal measure. That ensures we are always able to offer the best possible care.

Of course, the fashion element also plays an important role in the design of the shoes. With a great eye for detail, adjusted to suit current trends, we add touches that give our shoes an appearance very much comparable to that of regular shoes.

A high proportion of manual work, use of quality-tested materials and environmentally friendly manufacturing ensure our shoes are highly rated by our customers. More than 3,000 partners worldwide in the orthopaedic (shoe) technology sector put their faith in our my generation products and, in doing so, ensure optimal treatment.

Foot measurement device
Item no.: 032641001

SIZING

BECAUSE THE SHOE HAS TO FIT

Our feet have the task of carrying us throughout our lives. That makes shoes especially important. They should protect us and yet also be comfortable. And not have a negative influence on growth.

GOOD TO KNOW: the feet of a small child (up to the age of four) will generally grow up to two centimetres a year, which is as much as three shoe sizes. From the age of four, the growth can be as much as two shoe sizes per year. In order to avoid damage to the feet, shoes should never be bought in sizes that are too small, nor too big. So in this case, size matters.

OUR THERAPEUTIC SHOES PROVIDE A GOOD HOLD

For a well-fitting shoe, a proper heel hold is just as important as diverse options for adjustment on the instep. In addition, shoes need to have enough space for the toes. That makes accurate sizing of shoes especially important.

For children and youths, that is calculated as follows:

$$\text{Foot length} + \text{Push space} + \text{Growth space} = \text{Shoe size}$$

└──────────┘
Additional space

With that in mind, we have developed a foot measurement device especially for our therapeutic shoes, which takes those values into consideration. It helps you ensure you are making the right choice.

WIDTH SELECTION

GIVE THE WHEEL A SPIN

In addition to the Schein app, our wheel provides a practical overview of the my generation last dimensions. When selecting the width, it is important to include insoles or orthotics in the measurement.

Wheel
Item no.: 099952080

MY DESIGN CONFIGURATOR

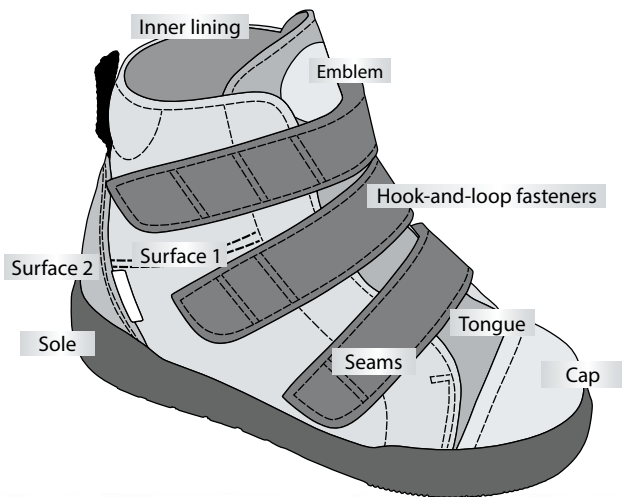

MY OWN INDIVIDUAL SHOE

The design of our therapeutic shoes is heavily inspired by everyday regular shoes, so that the fashion aspect, which plays a particularly important role in adolescence, is taken into account. With a wide variety of materials, types of leather and different fabrics, we have developed a diverse collection that combines trends with therapeutic benefits – so that the feet are optimally cared for.

However, we may not always satisfy personal taste. For example, children, teens or adults may like one of our models, but would prefer it in a different combination of colours or materials to the one shown in the catalogue. With that in mind, we have developed the my design configurator, which allows you to create your own unique pair of shoes according to your own individual preferences.

From the sole to the laces, there are numerous design variations with a wide range of colours. Just print out your chosen template, take it to your retailer and order your self-configured model. Deviations in colour are possible and we reserve the right to make changes.

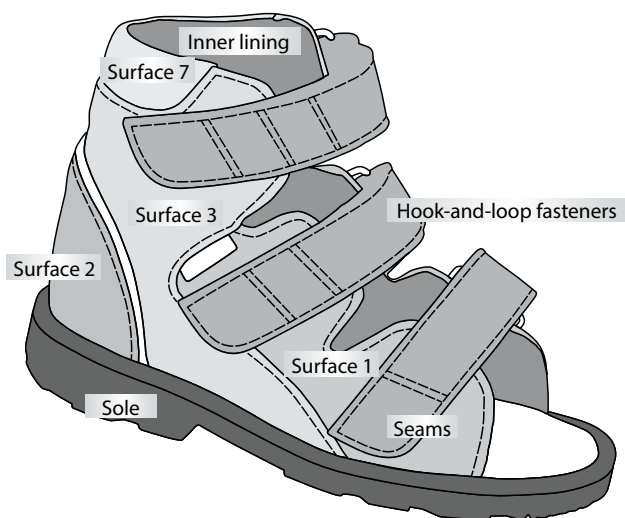

The following symbols denote the models that you can configure according to your taste.

QUALITY MANAGEMENT

SUSTAINABLE AND ENVIRONMENTALLY FRIENDLY PRODUCTION

For years, our business has been committed to sustainable and environmentally friendly production. This applies both to the production of the leather and the entire downstream manufacturing process, in furtherance of a safe, clean environment.

TÜV-CERTIFIED

As a family company which takes its responsibilities seriously, it goes without saying that we produce to exemplary quality standards. To ensure this, we subject our processes to independent external quality auditing which we voluntarily undergo every year.

The quality management certificate awarded to us since 1997 by the testing body TÜV-Rheinland is testament to the efficiency of our enterprise. The certificate attests that our working processes are systematised, thereby guaranteeing the manufacture of high-quality products.

MATERIALS

OnDry by onSteam – KEEPING THE INSIDE OF SHOES DRY

Moist feet are usually the result of excessive sweating inside the shoe. This can even lead to the soaking of the shoe lining

To counteract this, we use our 'OnDry by onSteam' inner lining material in many of our new shoe models. This exceptional microfibre material has the special benefits of being extremely absorbent and sweat-resistant.

Its special membrane function aids moisture evaporation, keeping the inside of shoes dry. In addition, the material is 100% breathable, heat-regulating and odour-neutralising.

LEATHER IS A NATURAL PRODUCT

We work exclusively with manufacturers who meet our high standards of top-quality workmanship and sustainable production. This is the only way to fully meet the health-related needs of our customers.

The leather used for our therapeutic shoes is therefore subject to statutory test criteria. Constant inspections – of everything from leather tanning to workmanship in footwear construction – ensure consistently excellent quality. Occasional scratches or scarred insect bites, which may be present on the upper leather, are clear evidence of the natural quality of the material and not a processing defect.

The leather symbol acts as a quality seal documenting the quality of the leather and providing the best-possible security.

SOLE TYPES

ORTHOTIC, SUPPORT, ANTI-VARUS/NEUTRAL SHOES:

- The flexible outsole supports the rolling motion of the foot
- In anti-varus/neutral shoes, the outsole is less flexible due to the built-in three-point correction
- Shell bottom with deep space to accommodate foot (approx. 15 mm at size 28)
- Wide contact area
- Foam PU bottom (solid material)
- Easily adjustable

- Applied leather welt
- Wide contact area
- Foam EVA bottom with sunbeam profile (the medial winged heel section supports the inside of the foot)
- Easily adjustable

- Rocker bottom
- Wider contact area
- Micropore midsole
- The triangular profile of the rubber outsole ensures a secure stance
- Very easy to modify

Please note that the toe spring, outsole production and sole shape and width may vary, even within one shoe segment.

SUPPORT SHOES

- The flexible profil sole supports a natural gait
- Shell bottom with extra depth (approx. 10 mm at size 28)
- Wider contact area
- Foam PU bottom with air-chamber system
- Adjustable

ANTI-VARUS/NEUTRAL SHOES

- Shell bottom with extra depth (approx. 10 mm at size 28)
- Wider contact area
- Foam PU bottom with air-chamber system
- Adjustable

SOLE MATERIAL, HEEL RAISES, ETC.

SEE HOW TRENDY SOLES CAN BE

Sole plates are available in size 38 × 26 cm and the following colours.

Item no.	Colour	
231940000	black	
231940001	white	
231940002	honey	
231940003	pink	
231940004	blue	
231940005	orange	
231940006	mamba green	
231940007	grey	
231940008	red	

ROTATION HEELS

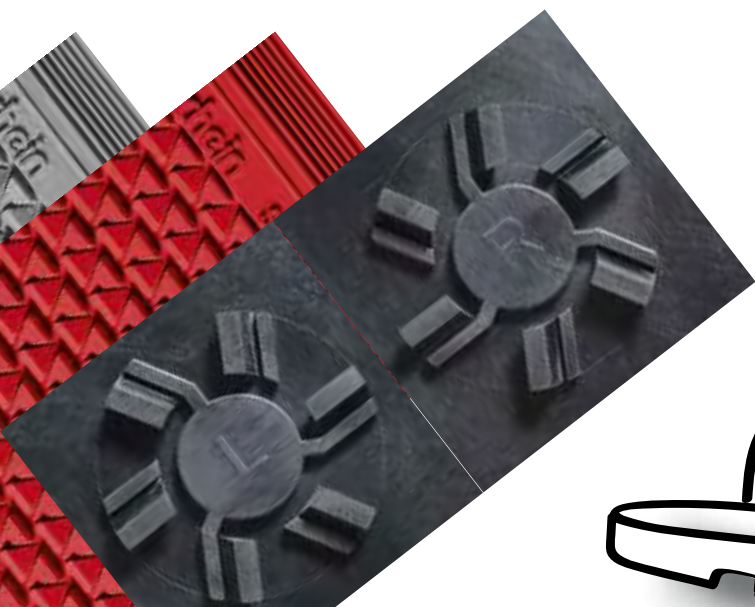

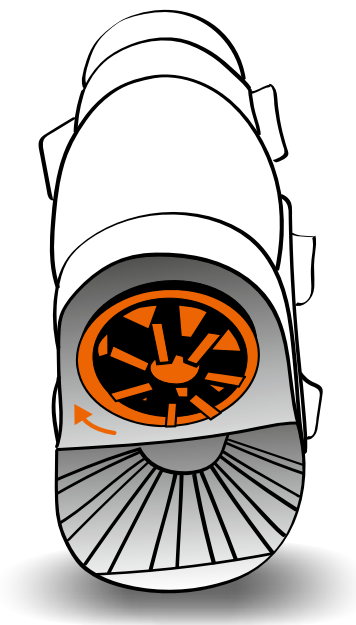

With each step, the (de-)rotation heel supports the natural gait pattern and accelerates the correction of leg rotation errors.

The effective wearing period of a pair of (de-)rotation heels is between four and six weeks.

The rotation is not reduced by individual fins breaking off during the six-week wearing period. Even with three or four fins, rotation is still effective. This can be easily checked by pressing the heel area of the shoe with your hand.

Item no.	Form	Size (approx.)	Colour
012250010	round	68 x 68 mm	black
012250020	round	87 x 87 mm	black

Correction usually takes place over a period of nine months, during which at least six pairs of (de-)rotation heels are used. Of course, the treatment period depends on the severity of the rotation error.

SOLE MATERIAL, HEEL RAISES, ETC.

LACES IN MANY COLOURS AND LENGTHS

Contrasting tones or a fresh combo: it's up to you. We offer laces in many colours and lengths. That allows you to design your shoes the way you want them. With lengths of 75, 90, 120 and 150 cm.

In the my design configurator, you can view and combine the different laces.

INTERCHANGEABLE 'COMFORT' HOOK-AND LOOP FASTENERS

Some models offer you two ways to attach the Hook-and Loop fasteners. That gives you the choice of fastening the shoe with or without a pulley system. In this way, you can ensure the ideal fit for the foot and the best-possible hold.

The individual Hook-and Loop fasteners allow you to customise the look of your shoes.

INSOLE CARE

INSOLES ARE OFTEN ESSENTIAL WHEN USING THERAPEUTIC SHOES

Support for the anatomical structure in the form of an insole can be helpful to complement therapy with an anti-varus shoe. Among other benefits, an orthopaedic insole can be used to improve hindfoot guidance.

In the case of one-sided treatment with an orthosis and corresponding orthotic shoe, the other side often also needs an insole. This can be a supportive, corrective or stimulating insole.

In order to optimise the effect and function of a stabilising shoe, it is often supplemented by an insole for appropriate treatment.

In order to achieve the desired therapy goal and the required effect, our Novaped orthopaedic foot supports are available in different designs and with different material combinations. These are processed by a healthcare technician into a custom-made product according to a medical prescription in order to support, correct or stimulate the foot.

A small selection of insoles from our range is shown on this double page. For more insoles, see our website.

ORTHOTIC SHOES

SPACE FOR THERAPY

Many people often find wearing a leg orthosis restricts their freedom of movement. Our orthotic shoes are therefore designed to ensure an optimal fit for the foot, orthosis and therapeutic shoe.

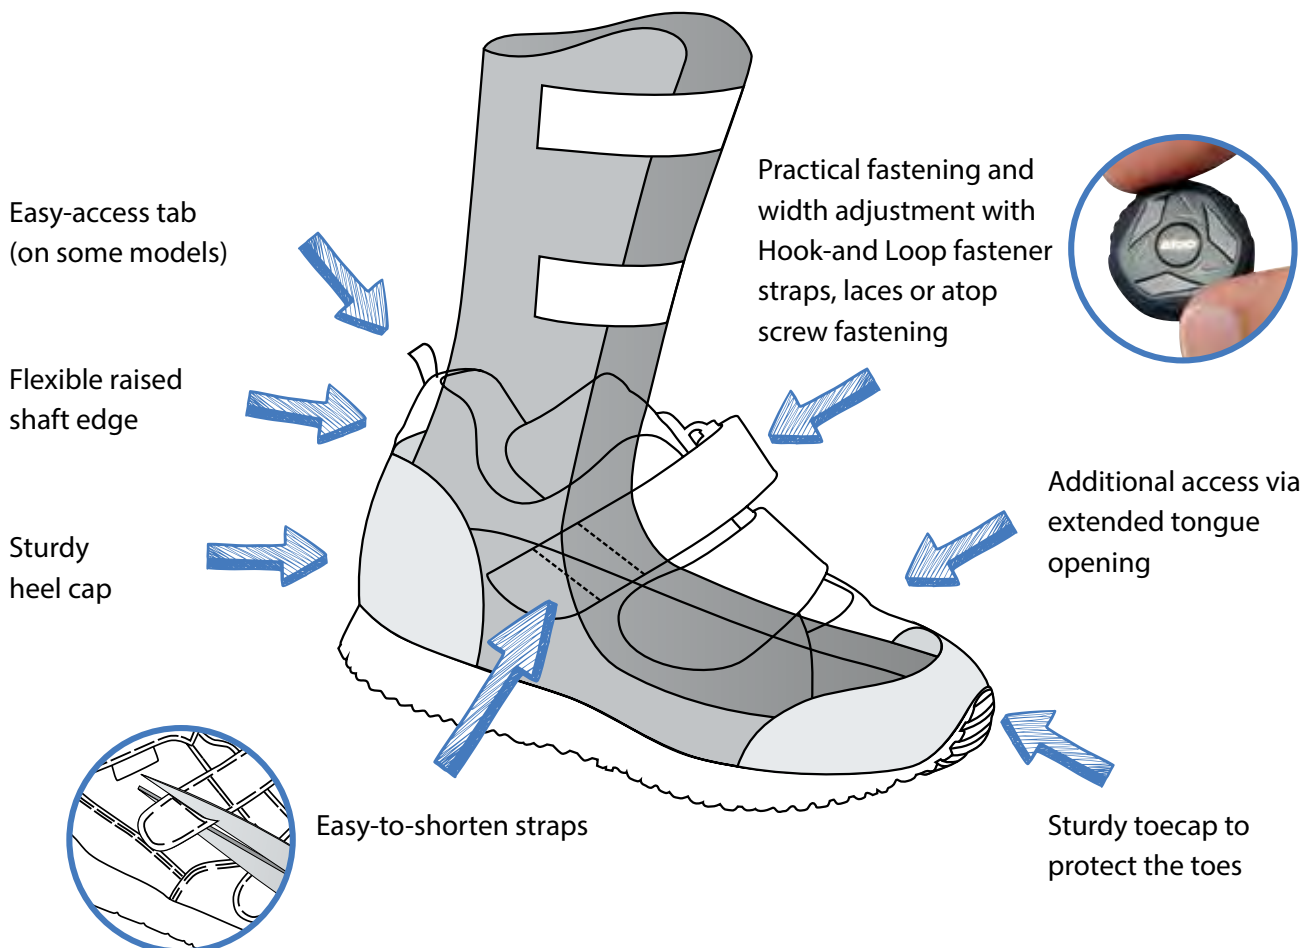

The sturdy heel cap in combination with the raised and flexible shaft edge ensures a good fit and high stability.

But an ideal fit is not all that matters. In everyday life in particular, it is extremely important that our orthotic shoes are easy to put on and take off.

With that in mind, many of our models have a tab to simplify putting on and removing them.

But that's not all: the extended tongue opening in many models makes it possible to open the entire shoe very wide.

If further adjustments are required for the orthosis, they can be made individually by an orthopaedic technician. Specific orthopaedic measures and additions to ensure the feet are optimally cared for can be implemented on all orthotic shoes.

ORTHOTIC SHOES FOR JOINT ORTHOTICS

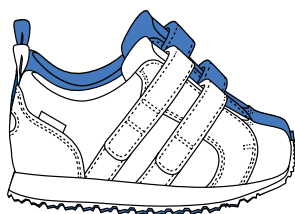

Wearers of joint orthotics need a shoe with a special heel shape. Although the shoe is larger than usual in the hindfoot and heel area, it still has to fit well. This is the only way to ensure an optimal hold and correct movement of the foot when walking.

Our orthotic shoes labelled with the symbol shown here have been specially developed to meet those needs.

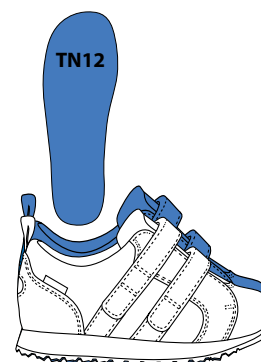

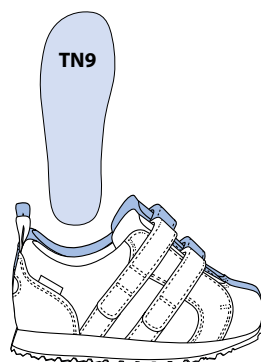

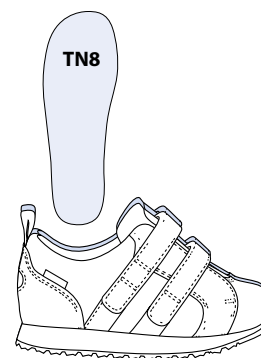

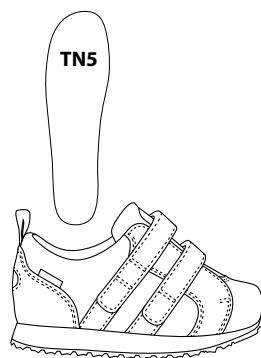

ORTHOTIC SHOE WIDTH TN12

To provide for large-sized orthotics, together with craftspeople we have developed the width TN12 for our orthotic shoes.

All TN12-width shoes are supplied with two insoles with approx. 40°/50° Shore A hardness. This allows the volume to be adjusted through the removal of one or both of the insoles.

In this way, the external appearance is not affected. For one-sided treatment, the unaffected foot can be fitted with a different width and shoe size. This is also the case for all other TN widths in the orthotic shoes sector.

Available in the widths TN5, TN8, TN9 and TN12. The widths and sizes of shoes can be combined in cases of one-sided treatment.

PECORE

TWO INNOVATIVE FASTENER VERSIONS FOR IDEAL HOLD

For the following models, we offer you two options for attaching the Hook-and Loop fasteners

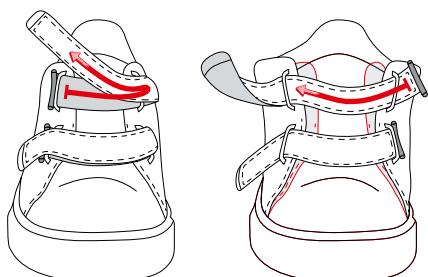

You have the choice of fastening the shoe with or without a pulley system. This optimally adjusts the shoe to the foot and at the same time achieves the best possible hold.

The 'Comfort' Hook-and Loop fasteners can be a useful alternative for some people due to age, physical limitations or other needs.

QUICK GUIDE

- A. Fastening of the Hook-and Loop fasteners with pulley function
- B. Fastening of the Hook-and Loop fasteners using its full length

A.

B.

OUR TIP: The individual Hook-and Loop fasteners allow you to customise the look of your shoes.

You can find matching interchangeable Hook-and Loop fasteners on page 23.

ORTHOTIC SHOES

LUCKY

TWO INNOVATIVE FASTENER VERSIONS FOR IDEAL HOLD

For the following models, we offer you two options for attaching the Hook-and Loop fasteners.

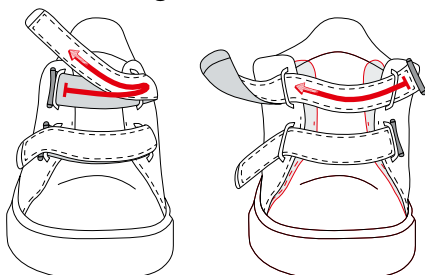

You have the choice of fastening the shoe with or without a pulley system. This optimally adjusts the shoe to the foot and at the same time achieves the best possible hold.

The 'Comfort' Hook-and Loop fasteners can be a useful alternative for some people due to age, physical limitations or other needs.

QUICK GUIDE

- A. Fastening of the Hook-and Loop fasteners with pulley function
- B. Fastening of the Hook-and Loop fasteners using its full length

A.

B.

OUR TIP: The individual Hook-and Loop fasteners allow you to customise the look of your shoes.

You can find matching interchangeable Hook-and Loop fasteners on page 23.

ORTHOTIC SHOES

EASY ENTRY THROUGH A MOVABLE, FOLD-OUT REAR CAP

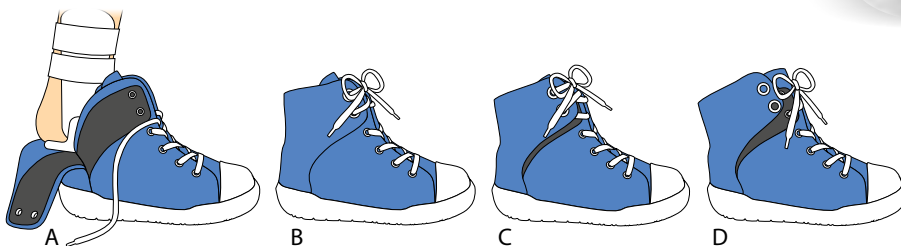

ADJUSTMENT TO SUIT FOOT POSSIBLE

JEWEL

QUICK GUIDE

- Step in from behind.
- Thread the laces at the same time through the shaft and rear cap eyelets.
- If the shaft and rear cap eyelets are not aligned, only lace through the rear cap.
- Thread the lace up through the shaft eyelets only. Then fold up the rear cap. The Hook-and Loop fastener strap provides sufficient hold in the shoe.

Precise screw fastening

Put them on. Turn the wheel. Ready.

ORTHOTIC SHOES

ORTHOTIC SHOES

THE PERFECT TWIST!

Originally developed for sport, this quick-lacing system for orthotics wearers with limited motor skills makes putting on and removing shoes considerably easier. The loosening and tightening is performed with the turning wheel. When the wheel is turned, all the laces are uniformly adjusted in a manner adapted to the patient's foot and set with accuracy down to the millimetre. This fastening ensures a stable hold and the highest level of comfort when wearing the shoe.

The sturdy design of the atop fastening system supports the philosophy of our orthotic shoes:

- Very good hold
- Fine adjustment
- One-handed operation
- Low weight
- Available as a front or rear fastening

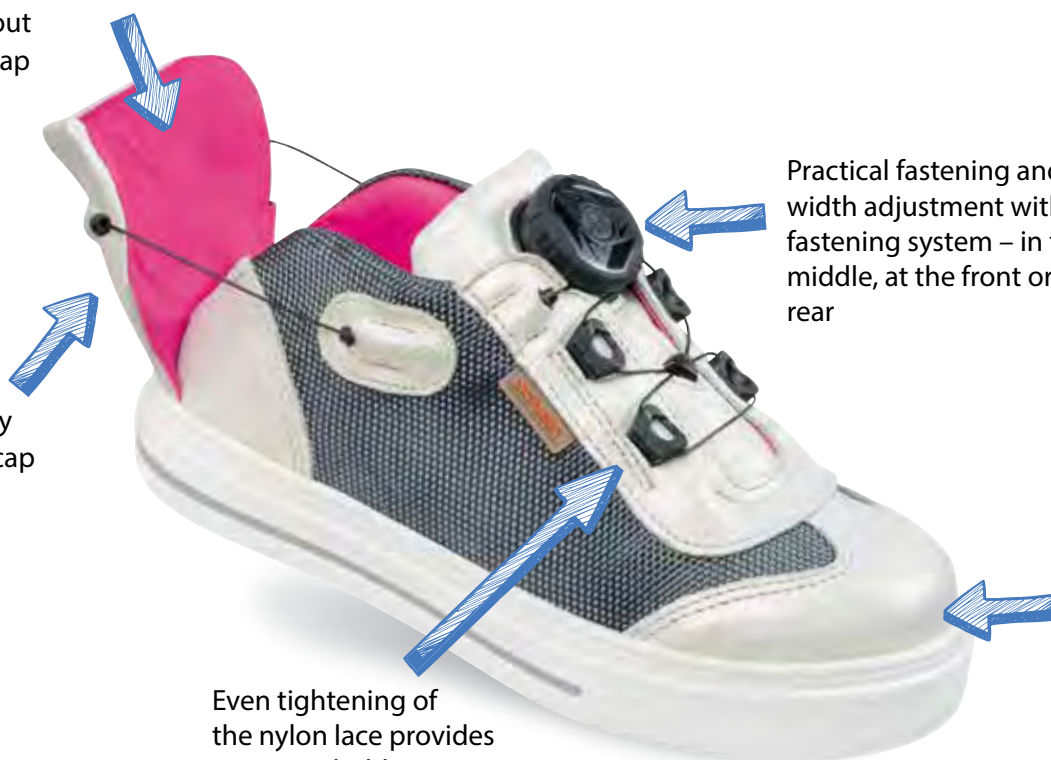

Easy access via the movable, fold-out rear cap

Sturdy heel cap

Even tightening of the nylon lace provides optimum hold

Practical fastening and width adjustment with atop fastening system – in the middle, at the front or at the rear

Sturdy toecap to protect the toes

SECURE HOLD

We offer two versions of the atop fastening system:

- With turning wheel on the rear cap
- With turning wheel on the middle of the shoe

Both lacing systems provide excellent hold by uniformly tightening the entire surface.

Compared to conventional laces, which can absorb water or dirt, the low-friction plastic covers wrapped around the fine stainless-steel wires maintain their featherlight weight.

Even under heavy strain, the coil and wire form a long-lasting combination.

Once affixed, the lacing stays in place – the orthotics or the foot are held securely.

TO LOOSEN:

simply turn the wheel to the left and the laces are loosened.

TO TIGHTEN:

turn the wheel to the right and the laces are fixed tightly.

SUPPORT SHOES

THE RIGHT FOOTWEAR FOR HELPFUL SUPPORT

Our stability shoes are highly versatile. They relieve strain on the feet and ankles, stabilise and guide the foot.

They have proven effective for the following indications:

- Supporting and guiding ankles
- Enabling and maintaining appropriate gait
- Impairment of mobility (walking), e.g. in case of paralysis with spastic components with a tendency towards pes equinus position
- Impairment of mobility (in this case walking), e.g. in case of severe damage to the ankle ligaments as part of conservative postoperative treatment or in case of spastic paralysis (after cerebral insult or infantile cerebral palsy) as temporary immediate treatment

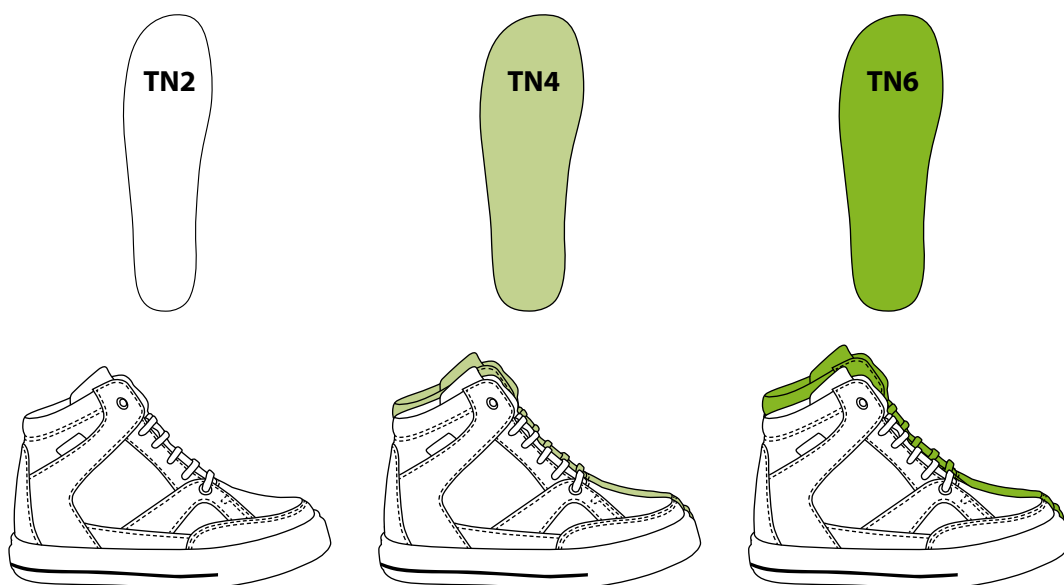

YOUR TRUSTY COMPANION – WITH FLEXIBLE AND INDIVIDUAL WIDTH ADJUSTMENT

Our aim is to form a strong team with our customers, doctors, physiotherapists, health insurance companies and medical services and to develop the best assistive technology in cooperation with our customers.

Our stability shoes meet all necessary requirements for recognition by health insurance companies as therapeutic aids. The widths and sizes of shoes can easily be combined in cases of one-sided treatment.

Important criteria for the quality of shoes are:

- Soft materials on the shaft ends to avoid pressure points and ensure high levels of comfort when wearing
- High level of heel stabilisation with the foot free to roll at the same time
- Hook-and Loop fasteners and zippers to make the shoes easier to put on and remove

Available in the sizes TN2, TN4 and TN6.

The widths and sizes of shoes can be combined in cases of one-sided treatment.

DORI

TWO INNOVATIVE FASTENER VERSIONS FOR IDEAL HOLD

For the following models, we offer you two options for attaching the Hook-and Loop fasteners.

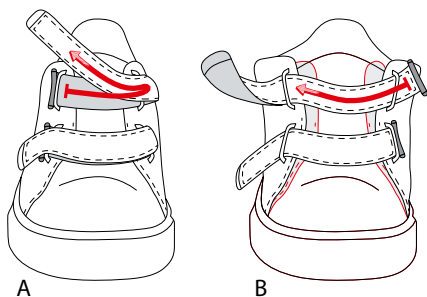

You have the choice of fastening the shoe with or without a pulley system. This optimally adjusts the shoe to the foot and at the same time achieves the best possible hold.

The 'Comfort' Hook-and Loop fasteners can be a useful alternative for some people due to age, physical limitations or other needs.

QUICK GUIDE

- A. Fastening of the Hook-and Loop fasteners with pulley function
- B. Fastening of the Hook-and Loop fasteners using its full length

OUR TIP: The individual Hook-and Loop fasteners allow you to customise the look of your shoes.

You can find matching interchangeable Hook-and Loop fasteners on page 23.

MULTI-SUPPORT SHOES

HIGHER SHAFT – WITH A STABLE ARTHRODESIS CAP

These models can be further reinforced by two thermoplastically mouldable stabilising rods on the inner and outer side. The stiffening elements are available in two strengths: white = strong, skin-coloured = medium strength. Four white rods are included. This allows for even more lateral stability and rotational stability in the ankle joint area, without compromising the rolling of the foot. The integrated rolling section on the ball of the foot facilitates step initiation.

As is the case with our other therapeutic shoes, individual shoe adjustments can also be made to these models. The applications for the multi-support shoe include, among other things, the follow-up treatment of conservatively or surgically treated capsular ligament lesions in the ankle, capsular ligament insufficiency or Achilles tendon injuries. It is also suitable for immobilisation of the tarsal and metatarsal areas, as well as follow-up treatment of fractures and arthrodesis.

Optional: Lateral rods provide additional stiffening and stability

Practical fastening and width adjustment with Hook-and Loop fastener straps or laces

Shaft and strap padding

High over-the-ankle cap to stabilise the ankle joint

ANTI-VARUS/NEUTRAL SHOES

SECURE CORRECTION FROM THE START

The child's sickle foot is a malposition that is often present from birth and can be well treated with conservative measures. In principle, pigeon toes should be treated as early as possible in order to avoid consequential damage. For that reason, treatment begins in infancy. Depending on the extent of the malposition, treatment can be carried out with physiotherapy, plaster casts, insoles and night splints.

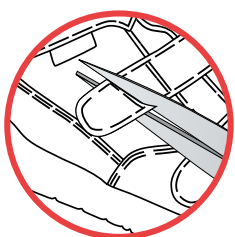

High shaft to stabilise the ankle

Shaft padding to ensure wearing comfort

Medially extended rear cap over the point of correction of the base of the big toe for consistent correction

Practical fastening and width adjustment with Hook-and-Loop fastener straps or laces

Sturdy toecap to protect the toes and avoid wear

Easy-to-shorten straps

The widths and sizes of shoes can be combined in cases of one-sided treatment.

SICKLE FOOT AND CLUBFOOT ORTHOSIS

The sickle foot and clubfoot orthosis for babies is a corrective shoe-shaped orthotic device made of soft leather. To permit variable correction, the sole of the orthosis is divided into two parts. The rear foot is supported by a heel cap, while correction of the forefoot misalignment is done by fitting a tension spring at the other edge of the foot in the Lisfranc joint region. The attachment to the large toe's joint and the cuboid bone area at the outer edge of the foot guides the forefoot into the corrected position. The orthosis is mainly used for infants and toddlers in the crawling age. After that, night splints may be used if further corrective treatment of the forefoot misalignment is necessary.

Infant pigeon toes orthotics
039101 (right)
039102 (left)
13 sizes from 80 to 150 mm
(not suitable for walking or standing)

Corrective accessory:

The pigeon toe orthosis for babies is delivered with mounted spring at normal tension, plus two springs for medium and maximum tension and a fastening element.

Depending on the prescription, either dynamic or fixed-position correction is implemented.

Dynamic correction

Fixed-position correction

BABY SICKLE FOOT SHOES

The sickle foot shoe for babies is equipped with a fixed degree of anti-varus correction. The shoe's outsole means that it is suitable for standing and walking. In case of one-sided sickle foot, a neutral shoe is available for the unaffected foot.

Eight sizes from 80 to 150 mm

Infant pigeon toes shoe with correction

039502 (left)

Infant pigeon toes shoe in neutral position
039506 (right)
039507 (left)

SICKLE FOOT AND CLUBFOOT ORTHOSIS

The sickle foot and clubfoot orthosis is a passive corrective orthosis made of polyethylene and used to treat childhood sickle foot and previously treated club foot. The orthosis is a as night splints to correct the forefoot misalignment by the three-point principle. In case of a slight pointed-foot component, an additional thigh grip can be applied to achieve the desired 90° knee angle, thereby relieving the strain on the calf muscles.

ANTI-VARUS/NEUTRAL SHOES

MAXI

WE HAVE SOMETHING
AGAINST WET FEET

There is nothing more uncomfortable than cold, wet feet. That is why SympaTex developed a special membrane that absorbs sweat and directs it outwards through the shoe. This ensures that your feet always stay warm and dry. At the same time, the SympaTex membrane prevents external moisture from penetrating the shoe. In other words, it provides effective protection and is also breathable.

Perfect for running riot outdoors
 You don't want to go home anymore

MARTY
